

Scientific Sleuthing

chemical discoveries made in New Zealand

At long last, a sequel to *New Zealand is Different!*

When that milestone book in the history of New Zealand chemistry was published in 1997, the scientific landscape in New Zealand was very different. Much change has occurred since then, and New Zealand scientists are now working at global level, solving problems for the world and boosting the New Zealand economy.

The 14 essays in this new full colour volume include:

The Discovery and Development of High-Temperature Superconductors by Jeffery Tallon and Robert Buckley

Cancer Drug Development in New Zealand: the story of the Auckland Cancer Society Research Centre by Bill Denny

Extraterrestrial Chemistry to New Zealand Industry by Murray McEwan and Barry Prince

Visualising the Molecules of Life by Edward Baker

Reserve your copy now at the pre-publication price of \$39.95 including postage and packaging within New Zealand.

Overseas buyers, please add \$8 per copy for postage to Australia and the South Pacific and \$20 elsewhere.
